

# GRANITE NERO ASSOLUTO ZIMBABWE

Porphyry is an igneous rock, that is of volcanic origin, which was formed by the cooling of volcanic lavas. It consists of a base composed of so tiny crystals that it gives this base the characteristics of a glassy paste, in which however larger crystals are immersed, mostly quartz. In much smaller quantities there are also feldspar and more.

## Category:

### Finish

polished, matt, bush hammered, flamed,  
brushed

\* The indicated weight can vary by  
about 5% due to the different weight  
specific for the various classes of  
product.

## Certifications
